

REQUIREMENT ANALYSIS DOCUMENT:

Project Title

Perfume Shop Management System

Introduction

A Perfume Shop Management System is a database application designed to manage the daily operations of a perfume store. It helps organize information related to perfumes, customers, suppliers, orders, inventory, and payments. The system provides an efficient way to store, retrieve, update, and manage business data, reducing manual work and improving accuracy.

Purpose

The purpose of the Perfume Shop Management System is to:

- Maintain records of perfumes and their stock levels.
- Manage customer information and purchase history.
- Process customer orders efficiently.
- Track inventory and restock products when needed.
- Manage supplier details and purchase orders.
- Generate bills and maintain payment records.
- Produce sales and inventory reports for business analysis.

Functions / Operations on the Data

1. Product Management

- Add new perfume products.
- Update product details (name, brand, fragrance type, price, quantity).
- Delete discontinued products.
- View available products.

2. Customer Management

- Add new customer details.
- Update customer information.
- View customer purchase history.
- Delete inactive customer records.

3. Order Management

- Create new customer orders.
- Update order status (Pending, Packed, Shipped, Delivered).
- Cancel orders when required.
- View order history.

4. Inventory Management

- Track available stock.
- Update stock after each sale.
- Add new stock received from suppliers.
- Display low-stock products.

5. Supplier Management

- Add supplier details.
- Update supplier information.
- View supplier records.
- Delete supplier records if no longer associated with the shop.

6. Payment Management

- Record customer payments.
- Generate invoices/bills.
- View payment history.
- Support multiple payment methods (Cash, Card, UPI, Online Payment).

7. Sales Reports

- Generate daily, weekly, and monthly sales reports.
- View best-selling perfumes.
- Analyze revenue and profit.
- Monitor inventory status through reports.

Expected Outcome

The Perfume Shop Management System will provide a centralized database for managing all shop operations. It will improve data accuracy, reduce manual effort, ensure efficient inventory management, and support better decision-making through detailed reports.
